## PROJECT OVERVIEW

Since 2003, the Southwest Michigan Planning Commission (SWMPC) and representatives of each of the three counties (Berrien, Cass, and Van Buren) in the Southwest Region and the Michigan Department of Transportation (MDOT) have jointly conducted annual assessments of the condition of the Southwest Region's federal aid eligible roads. These assessments have utilized the Pavement Surface Evaluation and Rating (PASER) system in establishing road conditions. The effort has been funded and administered through the State of Michigan Transportation Asset Management Council and has satisfied the Governmental Accounting Standards Board Statement 34 (GASB 34), requiring tri-annual road assessments for governmental units receiving federal aid, doing so with minimal staff over short time periods. SWMPC hopes to use the data gathered here to assist member agencies in developing plans for the effective management of their pavement networks.

## METHODOLOGY: THE PASER ROAD RATING SYSTEM

PASER, or Pavement Surface Evaluation and Rating, is a visual test of the surface condition of the road that utilizes a ten-point scale, focusing on pavement conditions; structural or geometric defects are not considered in determining the ratings. Ratings are applied to road segments of varying length, with segment values ranging from 10 for a new road segment to 1 for a completely failed segment, and specific ratings determined by the number and type of surface defects. The ratings are compiled by teams of three to four individuals who drive the roads and conduct windshield surveys. PASER rating charts for asphalt, concrete, and gravel roads have been included in the appendix of this report.

PASER Rating	Pavement Quality
10	Excellent
9	
8	
7	
6	
5	
4	
3	
2	
1	Poor

The State of Michigan Asset Management Council has requested that the information gathered in this survey be reported using the following categories:

- **Roads with PASER ratings of 8-10 require Routine Maintenance.** Routine maintenance encompasses day-to-day maintenance activities, such as street sweeping, drainage clearing, shoulder gravel grading, and sealing cracks to prevent standing water and water penetration.
- **Roads with PASER ratings of 5-7 require Capital Preventive Maintenance.** Capital preventive maintenance is a planned set of cost effective treatments to an existing roadway system that retard future deterioration and maintain or improve the functional condition of the system without significantly increasing structural capacity. The purpose of capital preventive maintenance fixes is to protect the

pavement structure, slow the rate of pavement deterioration, and/or correct pavement surface deficiencies. These treatments are targeted at pavement surface defects primarily caused by the environment and by pavement material deficiencies.

- **Roads with PASER ratings of 1-4 require Structural Improvements.** This category includes work identified as rehabilitation and reconstruction, addressing the structural integrity of a road.

### **Computer Equipment and Software**

Teams collected data using a laptop computer with the RoadSoft GIS Laptop Data Collector software loaded. A Garmin GPS 35 PC TracPak Global Position System unit was connected to the laptop to track position and locate road segments. RoadSoft GIS is an asset management software package created and distributed free of charge by the Michigan Technology Institute's Technology Development Group. The current version of the program was designed with a special module to collect PASER rating data known as the Laptop Data Collector (LDC).

### **Staff Time**

For the purposes of this project, a team of three to four members was used for collecting PASER data. Each team member played a separate role within the vehicle during the data collection. One individual drove and collaborated in the road rating, a second navigated and also collaborated in the road ratings, and a third entered the rating information into the laptop computer; when the team rated roads within a city or village, a fourth member would be added from that city or village. The team was comprised of one SWMPC representative, one representative from a county road commission (depending upon which county the team was in at the time), and one MDOT representative from the Coloma Transportation Service Center (TSC). Several cities and villages also participated in the project. In addition, one other SWMPC team member handled the processing and uploading of the data to TAMC.

### **Training**

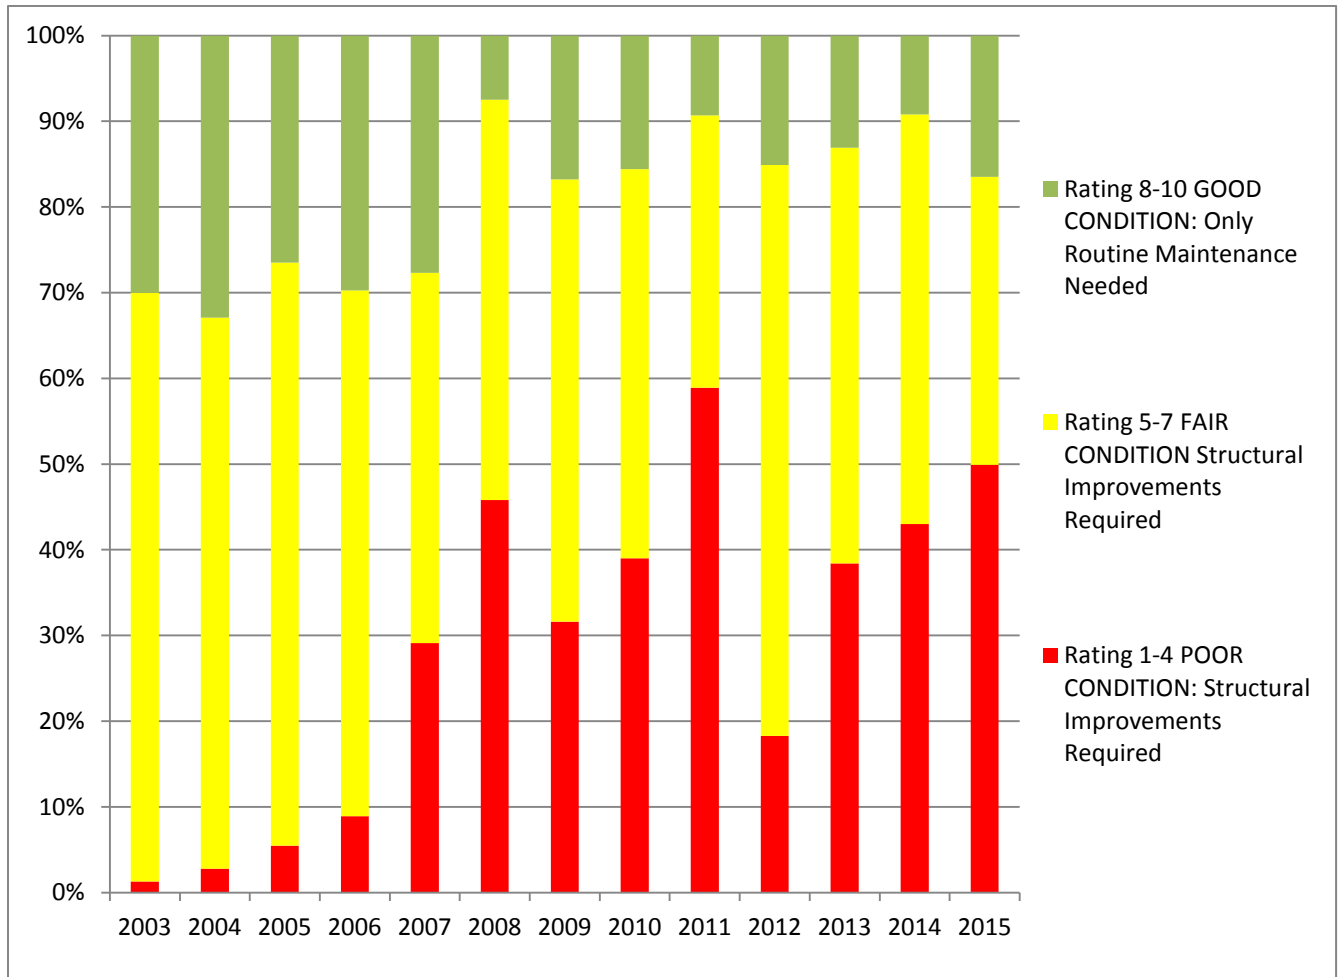

All participants in the vehicle during the PASER survey of federal-aid roads were required to attend a daylong training session that took place at in Kalamazoo or Grand Rapids offices. Participants received an overview of the project and were given instruction on how to use the RoadSoft software and the PASER road rating system for data collection. Once out in the field, experienced staff members taught new participants how to use the RoadSoft program and guided them through the rating process.

## RESULTS

### County-Wide Results

As shown in Figure 1 and Table 1 below, the surface condition of **federal aid eligible** roads in Van Buren County has generally worsened from 2003 through 2015. The percentage of assessed road segments receiving a Good rating of 8-10 has decreased from a high of 32.9% in 2004 to a low of 7.5% in 2008. Likewise, the percentage of road segments rated Poor (1-4) grew from a low of 1.3% in 2003 to a high of 58.9% in 2011. There do seem to have been some gains since that time, but as other results show, deterioration is still the general trend.

**Figure 1:** Percentage of federal-aid eligible road segments falling under each surface condition, by year, 2003-2015 for Van Buren County

**Table 1: Percentage of Federal- Aid Roads in Each Rating Category and Total Miles Rated, 2003-2015**

Year	1 to 4 Structural Improvements	5 to 7 Capital Preventive Maintenance	8 to 10 Routine Maintenance	Total	Total Miles Rated
2003	1.3%	68.7%	30.0%	100%	511.0
2004	2.8%	64.3%	32.9%	100%	481.2
2005	5.5%	68.1%	26.5%	100%	546.5
2006	8.9%	61.3%	29.7%	100%	563.8
2007	29.1%	43.2%	27.7%	100%	569.3
2008	45.8%	46.7%	7.5%	100%	469.5
2009	31.6%	51.6%	16.8%	100%	274.3
2010	39.0%	45.4%	15.6%	100%	306.7
2011	58.9%	31.8%	9.3%	100%	227.7
2012	18.3%	66.6%	15.1%	100%	241.1
2013	38.4%	48.5%	13.1%	100%	373.4
2014	43.0%	47.8%	9.2%	100%	241.1
2015	49.9%	33.6%	16.5%	100%	367.1
<b>2003-2004 Totals</b>	2.0%	66.6%	31.4%	100%	992.2
<b>2014-2015 Totals</b>	47.1 %	39.2%	13.7%	100%	608.2
<b>Change from 03-04 to 14-15</b>	<b>45.1%</b>	-27.4%	<b>-17.7%</b>	--	-384.0

While surface conditions show a clear downward trend, it is important to exercise care in making specific comparisons between years. Between 2003 and 2007, efforts were made to rate the entire network of federal aid eligible roads in Van Buren County. Beginning in 2008, however, the road network was split approximately in half, with alternating halves being assessed on consecutive years. In 2013, the Van Buren County Road Commission aimed to rate all of the roads in the County, and therefore, the number of federal-aid eligible miles rated in 2013 was substantially higher than in previous years. Thus, ratings changes between consecutive years primarily represent surface condition ratings of entirely different road segments, as opposed to changes in condition of the same segments. To account for this change, Table 1 contains a row demonstrating the change in average conditions over 2003-2004 to the average conditions over 2014-2015.

It is worth noting, however, that the percentage of federal-aid roads in Van Buren County that were in good condition was higher in 2015 than in 2013, indicating possible

improvements along the same segments of roadway. Yet, the percentage of roads in poor condition continued to increase to the point where nearly half of the federal-aid roads rated in 2015 required structural improvements. Clearly, the trend continues to be towards deterioration.

### **Road Ratings by Jurisdiction**

In addition to the aggregate county-wide conditions displayed above, Table 2 displays yearly rating data by local jurisdiction. We encourage interested users to copy and paste these tables into Excel or another data processing software tool to conduct your own analysis, if you so desire.

The portion of the table displayed on page 14 of this document provides a detailed list of how road conditions have changed at the jurisdictional level over the past eleven years. Of the 29 cities, villages, and townships in Van Buren County with federal aid eligible roads, only 2 have seen a reduction over this time in the percentage of their federal aid eligible roads in poor condition, while only 7 have seen increases in the percentage of roads in good condition. Deterioration of the pavement network seems to be the overarching trend.

Perhaps most alarming in Van Buren County is that in 2003, 18 jurisdictions had 0% of their roads in poor condition. Three of those jurisdictions now have 90% of their federal-aid roads in poor condition, and every jurisdiction in Van Buren County has at least a portion of its federal aid mileage that requires structural improvements.

In addition, 24 jurisdictions have seen a decrease in the percentage of their roads in fair condition. This decrease is directly related to the increase in the number of road miles in poor condition throughout Van Buren County. The reason for an increase in roads in poor condition is likely a lack of timely preventative maintenance treatments to roads that were previously maintained in fair condition, even for those jurisdictions where the percentage of roads in good condition has increased. Communities may be spending most of their road funds on reconstruction of segments that are in poor condition, which automatically moves these roads to good condition. However, the reconstruction is likely not able to keep pace with the deterioration of roads from fair to poor condition. Reconstruction can be expensive, and a strategy that only involves reconstruction can leave little funding left over for communities to spend on preventative maintenance treatments on the rest of the road network.

Part of SWMPC's aim in compiling the PASER ratings and publishing an annual report is to promote planning that emphasizes a balance of structural improvements, preventative maintenance, and routine maintenance as a coordinated strategy for achieving and sustaining high- quality infrastructure.

\* Many jurisdictions had PASER ratings done in both 2014 and 2015, due to Van Buren County Road Commissions efforts to rate all of its roads each summer. Since there may be significant overlapping mileage, the report uses the ratings from whichever year (2015 or 2016) the highest number of miles were rated. In circumstances where the number of miles rated in 2015 was within 0.5 miles of the number rated in 2014, the more updated ratings were used in this table.

Red shading indicates deterioration, or an increase in the percentage of poor-condition roads or a decrease in the percentage of good-condition roads, respectively. Green indicates improvement, or respective decreases in poor-condition roads or increases in good-condition roads. There is no

color coding for roads in fair condition because it is difficult to determine if increases represent improvement on roads previously in poor condition, or deterioration of roads in good condition.
